

Wave Venom

"A Wave kiteboard with an Allrounder inside"

size: 143 cm x 42 cm
fins: 4 X Flow 5 G-10
technology: Top Sheet /ABS
sidewalls /PU core snowboard tech

The Venom opens a new trend in kiteboarding. Riding waves with a full twintip configuration and an outline, hull and rail designed for riding waves. Combining full freestyle manoeuvres with snappy off the lips and bottom turns is the bread&butter of this new model

The Venom is a new all round board designed to keep the wave riders happy with a rounded outline and rail designed for clean carving turns, but on a full-on twintip which still delivers pop and performance for those flat water freestyle days.

The Venom is CNC shaped with the Rrd trademark torsion box designed tips, a 0.5 mm deep single concave hull and specials "tilted tips": a special Venom feature that allows to reduce the wetted surface, still maintaining length when you need it, going through white water or waveriding.

The Venom's generous 42 cm width allow every level kiteboarder to enjoy this skatestyle kiteboard in every conditions, and its length is deceptive, since the real hull's wet surface is just 135 cm.

Constructed in heavy duty top sheet with PU sidewalls to resist the biggest hits you can dish out on or off the waves, the core thickness of 14 mm gives more floatation compared to classic freestyle twintips for riding waves with slightly easier "momentum" and passing slower wave sections: really a special Hybrid feature of this phenomenal "twintip for waves"!

The Venom is provided with the classic Rrd state of the art accessory package: comfortable EVA covered handle, moulded EVA/Neoprene asymmetrical foot straps, super comfortable pads with arch support design and four indestructible Flow 5 G-10 fins.

Our KPWT Wave World Champion Abel Lago said: "During my last Morocco trip, I used the Wave Venom many time with rough sea conditions and you can't imagine how much I enjoyed it!"
