

## RRD Type 9 unbeatable SLE design

Kite Size: 6 - 7 - 9 - 12 - 15  
SLE Design

RRD Type 8 was a reference freestyle 5 lines kite in 2007, and for 2008 season evolves into a Supported Leading Edge 4 lines kite: the RRD Type 9. The type 9 is an unbeatable mix of: superior manoeuvrability, easy de-power, light Bar pressure, easy re-launch, smooth progressive power.

### TECHNOLOGY OF CONSTRUCTION:

The T9 has a full list of technology details that make it a new step for state of the art reference:

- **New SPS system** with a new invisible inflating valve: the inflating valve has been redesigned and is now completely moulded inside the PU tube, underneath the Dacron layer. A stronger, more durable and lighter inflating valve for the single pump system that improves quick inflating and durability!
- **Hi-Resistance Ri-Ri zipper.** An industry excellence also used on America's cup sail bags. The zipper is our patented system for increasing/decreasing the leech tension, resulting in more or less power/hangtime.
- **Insignia double tape leech.** Our classic exclusive standard reinforced leech that improves resistance and reduces fluttering.
- **PVC round label strut end protectors:** in order to prevent abrasion on the strut end and increase the finishing effect of a high-performance.
- **Metallic PU strut end reinforcements:** a thin layer of PU with metallic interior is used to improve durability of the strut end.
- **DP 175 LL Dacron and Tejin Canopy.** We only use the best materials available in the market that are surely tested over the years with unmatched resistance to UV exposure and durability to salt water. A top performance kite can only be built with top level materials.

### DESIGN FEATURES:

Also the Type 9 has been computer designed with an remarked attention to the smallest seam accuracy in order to achieve a cleaner, almost wrinkle-free profile. Our main focus when designing the Type 9 has been:

- Increasing manoeuvrability on big sizes, like 15 and 12, and slowing it down in the smaller sizes to gain control when powered up.
- Cutaway leech in order to increase stability of the trailing edge and prevent fluttering.
- New reinforced bridle with replaceable spectra rope on pulleys area.

New SPS system with a new invisible inflating valve

New reinforced bridle on pulleys area

Hi-Resistance Ri-Ri zipper

Insignia double tape leech

PVC round label strut end protectors

Metallic PU strut end reinforcements

Kevlar reinforcements on leading edge

**Sebastien Garat won the 2008 KPWT World Championship and 2008 France Championship using production RRD Type9!**

**His feedback just after the French Championship:**

*"I nearly feel my kites like a Freestyle C-kite, but with much more depower thanks to the bridle. I'm able to make all the tricks that I want, with all the Sizes, and especially with the 7 in really Strong and Gusty wind. . . That's also a really polyvalent kite, allow me to be part of the best in Hang Time and Speed Crossing.*

*If you want one kite to make everything, don't hesitate, go for Type 9!"*
